DK 700

Miniature flowmeters with fine-adjusting needle valves ideal for analytical processes

Description

A new-style valve design allows the proportioning of ultra-low flow rates with an approximately linear control characteristic. The instrument is easy to install in switch panels. Clamp clip attachment on the rear of the instrument.

In place of a scale on the measuring glass, types DK 701 and DK 711 have a scale in yellow print on a black face-plate.

Types DK 702 and DK 712 feature a scale on the measuring glass and a face-plate of polycarbonate without a scale.

Special version with a plastic valve made of PEEK mod material and gaskets of TFM/Kalrez; accordingly, all wetted parts are made of materials that are highly resistant to chemical attack.

Special features

- Resistant to extreme chemical conditions
Standard: all wetted parts of PVDF, glass, stainless steel and Viton
optional: PVDF, PEEK mod, glass, and TFM/Kalrez
- Suitable for products containing chlorine additives and in corrosive atmospheres
- Easy panel mounting
- 19" plug-in unit for DK 701 and DK 702 to DIN 41494 Part 5, 6 modules wide and 3 modules high
- replaceable measuring glasses
- Needle valve for fine adjustment
- Max. allowable operating pressure: 4 bar (58 psig)
- Max. allowable product temperature: 100°C (212°F)
- Measuring range: max. 1000 l/h (37 SCFH) air or 40 l/h (0.16 US GPM water)
- Option: 6 mm (0.24") PVDF flexible tube connection

Technical data**Measuring ranges** (100% values)

Water 20°C (68°F)	2.5 to 40 l/h (0.01 to 0.16 US GPM)
